The screenshot shows the Microsoft Excel interface with the 'Table Tools' ribbon selected. The 'XML' group in the ribbon is active, and the 'XML Source' task pane is open on the right. The task pane shows a tree structure of XML elements, with 'name' selected. The main worksheet displays a table with columns: id, name, alias, stereotype, and modified. The table contains 18 rows of data, including various criteria and functions. The status bar at the bottom indicates 'Ready' and '100%' zoom.

XML Source

XML maps in this workbook:

model_Map

- object
 - id
 - name
 - alias
 - notes
 - stereotype
 - type
 - parentId
 - modified
- relationships

To map repeating elements, drag the elements from the tree onto the worksheet where you want the data headings to appear.

To import XML data, right click an XML mapped cell, point to XML, and then click
